

## PATIENT, SAMPLE

Date of Birth: 01-Jan-1950

Gender: Female

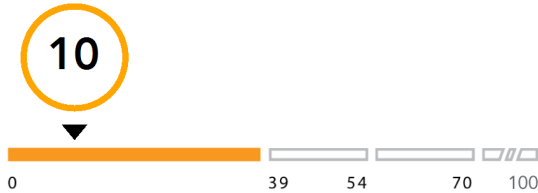

Report Number: OR000123456-01

Report Date: 17-Aug-2017

Ordering Physician: Dr. First-Name I. Ordering-Physician-Last-Name

## Patient Educational Summary

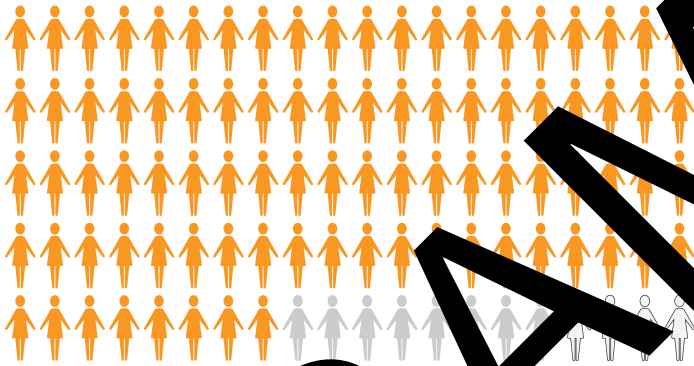

### What does your result mean?

Your Breast DCIS Score result of 10, combined with information about your age and tumor size, indicates a **12%** risk of your tumor returning as DCIS or invasive cancer in the same breast within 10 years, if treated only with breast-conserving surgery.

By measuring the activity of certain genes in your breast tumor tissue, the Oncotype DX<sup>®</sup> test predicts the risk of disease returning in the same breast, as either DCIS or invasive cancer - a key factor in deciding your treatment following DCIS surgery.

### What are the chances of your breast cancer returning?

If 100 women with a Breast DCIS Score result of **10** are treated with only breast-conserving surgery:

**88 women**

will **not** have their disease return in the same breast as either DCIS or invasive cancer within 10 years.

**12 women**

will have their disease return in the same breast as either DCIS or invasive cancer within 10 years. **4 women** will have their disease return in the same breast as invasive cancer within 10 years.

### What are your treatment options? (for doctor/patient discussion)

SURGERY

RADIATION

ENDOCRINE
