

TEST & CLINICAL INFORMATION

Invasive Breast Cancer

Oncotype DX Breast Recurrence Score® Test

NODAL STATUS: Invasive Tumor Size (cm):

Negative, Micromets pNmi (0.2-2.0mm)

Positive 1-3, Positive 4-9, LN Not Tested, Yes/No

Ductal Carcinoma in Situ

Oncotype DX® DCIS Score™ Test

DCIS Tumor Size (cm):

\_\_\_\_\_

Provide accurate tumor size based on excisional biopsy pathology report.

Colon Cancer

Important: Stage (AJCC 6th ed.) and Assay selection informs the results on the report.

Stage II Patient

(T3 or T4) AND Node Negative, MMR then Oncotype DX® Colon Recurrence Score™ Test if MMR Proficient

Oncotype DX Colon Recurrence Score Test (for known MMR Proficient tumors)

MMR Assay for Recurrence Risk Assessment

Stage III A/B Patient

Any T AND 1-3 Positive Nodes

Oncotype DX Colon Recurrence Score Test and MMR Assays

Oncotype DX Colon Recurrence Score Test

MMR Assay for Recurrence Risk Assessment

ER STATUS:

Positive, Negative, Inconclusive by IHC

PR STATUS:

Positive, Negative, Inconclusive by IHC, Not Tested

HER2 STATUS:

Positive, Negative, Equivocal

PHYSICIAN SIGNATURE AND ATTESTATION

Your signature constitutes a Statement of Medical Necessity (SOMN) and your attestation of the following: 1) accurate clinical information has been entered above, as this informs the risk estimates and clinical interpretation provided on the report.

Ordering Physician Signature Date (mm/dd/yyyy)

Print Physician Name

## REQUISITION FORM INSTRUCTIONS

Online ordering is available at [online.genomichealth.com](http://online.genomichealth.com). For assistance in setting up a Portal Account for online ordering, please contact Customer Service at 866-ONCOTYPE or [customerservice@genomichealth.com](mailto:customerservice@genomichealth.com).

### STUDY INFORMATION

1. If the order is associated with a Genomic Health involved study, enter the applicable study code.

### TEST & CLINICAL INFORMATION

1. Select the requested test and enter clinical information where required.
  - a. Invasive Breast Cancer patients
    - i. Ensure the ER status and nodal status are accurate, as this information informs the report results.
      1. A specimen submitted for the Oncotype DX Breast Recurrence Score® Test must be estrogen receptor positive (ER+) by either the IHC method used by a referring laboratory or the quantitative RT-PCR method used by GHI. If GHI determines that the submitted specimen is not ER+ by either method, a result will not be reported and the patient / payer will not be billed. The specimen is assumed to be ER+ if no selection is made.
      2. The nodal status is required to determine the extent of the clinical experience information to be included in the report for your patient. If the nodal status is not provided, a report with clinical experience for both node negative and node positive specimens will be sent.
    - ii. Result reports will include ER, PR, and HER2 scores.
  - b. Ductal Carcinoma In Situ patients (no invasive breast cancer present)
    - i. Result reports will include ER and PR scores.
    - ii. Provide accurate tumor size. Missing or inaccurate tumor size will impact the risk estimates on the report, and you may be contacted.
    - iii. The tumor size should be based on the excisional biopsy pathology report. If no residual DCIS was found on the excisional biopsy, use the tumor size determined on the core biopsy pathology report. If the tumor size is not reported, please write "Not Available."
  - c. Colon Cancer patients
    - i. The use of the test in stage II MMR-Deficient or in Stage III C patients has limited clinical applicability.
    - ii. For Stage II Colon Cancer patients, if "Sequential Assays" is selected, the Oncotype DX® Colon Recurrence Score™ Test will be run only if the specimen is Mismatch Repair Proficient (MMR-P). MMR-P specimens have a positive immunohistochemistry score for both MLH1 and MSH2.
2. In some cases, Genomic Health may use additional assessment methods, including confirmatory testing for HER2 status, to verify that the specimen meets the criteria for the Oncotype DX test.
3. Clinical information may be required for payer coverage determinations. If it is not provided, GHI may use the pathology report to obtain this information for reimbursement purposes.

### PHYSICIAN INFORMATION

1. Enter the contact information for the Ordering Physician. You may also enter the contact information for another healthcare provider who is treating the patient and should receive a copy of the report.
2. Assay results will be delivered to the Ordering Physician and additional recipients via the secure online portal and/or by fax based on the physicians' report delivery preferences on file at Genomic Health. To establish or change report delivery preferences, please contact Customer Service.

### PHYSICIAN SIGNATURE & ATTESTATION

1. The signature must be of an Ordering Physician (treating physician or pathologist) or his/her authorized delegate. Stamped signatures are not acceptable. If this order form is completed by the Physician's representative, the patient's medical record must contain the signed order from the Ordering Physician.
2. If the Requisition Form attestation has been signed and no exception criteria have been entered in the comments section, you attest that the patient meets the requirements for the test:
  - a. Invasive Breast Cancer: Newly diagnosed female patients with anatomic Stage I, II, or IIIA (T1-3, N1-2) ER positive breast cancer.
  - b. DCIS: Newly diagnosed female patients with DCIS (Stage 0, Tis, N0, MO). For Medicare Beneficiaries, the patient must meet the additional Medicare patient eligibility criteria:
    - i. Patient is a candidate for breast conserving surgery or breast conserving surgery plus radiation
    - ii. Test results are being used to determine treatment choice between surgery and surgery plus radiation
    - iii. Patient has not received and is not planning on receiving a mastectomy.
  - c. Colon Cancer: Newly diagnosed Stage II or III A/B colon cancer patients with adenocarcinoma or mucinous carcinoma.

### PATIENT INFORMATION

1. Enter the patient information.
2. Indicate whether multiple primaries are being submitted for the patient.
  - a. Multiple tumor specimens will be tested sequentially.

- b. For invasive breast cancer tests, if first tumor generates a Recurrence Score® result  $\leq 25$ , the second tumor specimen will be automatically processed. If first tumor generates a Recurrence Score result  $> 25$ , Customer Service will contact the ordering physician to determine how to proceed.
- c. If multiple tests are processed, there will be a charge for each test. Contact Customer Service to discuss insurance coverage information.

### BILLING INFORMATION

1. Enter the ICD-10 code that will be used for billing and reimbursement purposes.
2. Select the entity to be billed.
  - a. If the patient has Medicare Advantage or Managed Medicaid, select "Private Insurance."
  - b. If patient is accepting financial responsibility for the cost of the test, Customer Service will contact the Ordering Physician's office to collect payment information.
  - c. Before selecting Contracted Account, verify with Genomic Health that you have a contracted account on file.
3. If the patient's insurance is Medicare, enter the hospitalization status. If Inpatient, enter the date of discharge from the hospital. All Medicare patients will have an eligibility check and may be contacted during the process.
4. Complete the Primary and Secondary Insurance Information fields.
5. Include a copy of the front and back of both the primary and secondary insurance cards.
6. GHI will use the statement of medical necessity you provide to expedite insurance appeals.

### SPECIMEN RETRIEVAL

1. If indicated, GHI will request the retrieval of the appropriate specimen for the ordered assay on your behalf.
2. If the specimen retrieval section is not completed and the specimen is not submitted with the Order Form and Statement of Medical Necessity, GHI will request the specimen on your behalf. GHI will contact your office to determine the location of the patient's specimen.

### PATHOLOGY & SPECIMEN INFORMATION

1. Enter the identification number for the most representative specimen (i.e. the longest linear length of the highest grade tumor) on the appropriate line.
2. If multiple primaries are being submitted, enter the most aggressive tumor on line one; it will be processed first.
3. While the GHI laboratory can accept tumor blocks and unstained slides, blocks are preferred.
4. Include a copy of the pathology report with the Specimen Kit submission box. The pathology report may be used for reimbursement and/or administrative purposes.
5. If more than one tumor is being submitted for the patient, each tumor must be labeled with a unique Specimen Barcode (S-Barcode). GHI is not responsible for selecting the order in which specimens will be run. GHI will use the specimens in the order listed to complete the test.

### SPECIMEN PREPARATION INSTRUCTIONS

1. For specimen criteria and specimen preparation instructions, visit [oncotypeiq.com](http://oncotypeiq.com).
2. Please send either:
  - One fixed paraffin embedded tumor block.
  - Fifteen 5  $\mu$ m serial unstained slides.IMPORTANT: Hand number the serially sectioned slides to indicate the order in which they were cut. Unnumbered slides will be returned.
3. Formalin is the preferred fixative. Tissues processed in other fixatives should not be submitted.
4. Label all specimens with barcode labels from the Specimen Collection and Transportation Kit. Affix a coinciding barcode in the designated area on the Order Form. (Discard any remaining barcodes; do not use for future submissions.)
5. Label the specimens with an additional patient-specific identifier (e.g. patient name, date of birth, hospital number, order number, accession number). All specimens require two patient-specific identifiers for processing.
6. If you have any questions, please contact customer service at the phone number listed on the front side of this form.

### DOMESTIC SHIPPING INSTRUCTIONS

1. Before shipping, make a copy of the Order Form and Statement of Medical Necessity and retain it for your records.
2. Place the Oncotype DX Specimen Kit into the FedEx® Clinical Pak.
3. Complete the FedEx US Airbill. The airbill is pre-printed with Genomic Health shipping information.
4. Seal the Clinical Pak by removing the plastic adhesive protector from the white strip and secure.
5. Place the package in the designated FedEx pickup location at your site.
6. If your site does not have standard FedEx pickup, call 800-GO FEDEX (800-463-3339) to arrange for pick up.
7. To order additional kits, email Customer Service at [customerservice@genomichealth.com](mailto:customerservice@genomichealth.com).
